

*A complete line of the highest quality navigational lights for marine and bridge applications*

**PL PIER LIGHT**

B&B Roadway's Pier Lights (PL) are used as marine signal lights for marking stationary piers and fenders, per Coast Guard requirements. All Pier Lights use a cast aluminum housing (or optional cast silicon bronze) and are rain-tight and fully gasketed. The lamp can be easily accessed when performing maintenance checks. The light assembly is designed for heavy duty, long life service.

**PL - VR VANDAL RESISTANT PIER LIGHT**

The PL – VR offers all of the features of the PL light but also provides vandal resistant protection to the light.

**PL - BM BRACKET MOUNT PIER LIGHT**

The PL – BM offers all of the features of the PL light but is designed for pier lights that are required to be wall mounted.

**GL GAUGE LIGHTS**

The Gauge Light (GL) is designed to provide illumination for gauge signs. The body is precision die cast aluminum with a durable powder coat finish. All components are corrosion resistant. Lights are rain-tight and are equipped with a retained gasket. Lenses are thermal-tempered shock-resistant glass. A reflector is used to maximize light output. The fixture is designed with a hood to reduce glare and features an adjustable head, locking teeth and an internal gasket for secure, leak-free positioning of the head.

## BS BASCULE SPAN LIGHTS

The Bascule Span (BS) navigation light is designed for use as a marine signal light for marking bascule span bridges, per Coast Guard requirements. The housing is cast aluminum or cast silicon bronze and is rain-tight and fully gasketed. The lamps can be easily accessed when performing maintenance checks.

## SS SWING SPAN LIGHT

The Swing Span (SS) navigation light is designed for use as a marine signal light for marking swing span bridges, per Coast Guard requirements. The housing is cast aluminum or cast silicon bronze and is rain-tight and fully gasketed. The lamps can be easily accessed when performing maintenance checks.

## SS - 4 SWING SPAN LIGHT

The Swing Span 4 (SS-4) navigation light is designed for use as a marine signal light in situations where the SS Light fixture cannot be used. The housing is cast aluminum or cast silicon bronze and is rain-tight and fully gasketed. The lamp can be easily accessed when performing maintenance checks.

## VL VERTICAL LIFT SPAN LIGHT

The Vertical Lift (VL) span light is designed as a marine signal light for marking vertical lift bridge spans, per Coast Guard requirements. The housing is cast aluminum or cast silicon bronze and is rain-tight and fully gasketed. The lamps can be easily accessed when performing maintenance checks.

## CM CHANNEL MARGIN LIGHT

The Channel Margin (CM) navigation light is designed for use as a marine signal light for marking channel margin, per Coast Guard requirements. The housing is cast aluminum or cast silicon bronze and is rain-tight and fully gasketed. The lamp can be easily accessed when performing maintenance checks.

## CC CENTER CHANNEL LIGHT

The Center Channel (CC) navigation light is designed for use as a marine signal light for marking the center of a channel, per Coast Guard requirements. The housing is cast aluminum or cast silicon bronze and is rain-tight and fully gasketed. The lamp can be easily accessed when performing maintenance checks.

## NAVIGATIONAL LIGHTING OPTIONS

BBRSS fixtures meet or exceed United States Coast Guard regulation 33 CFR, Ch. 1, Part 118. All of our navigation lights are customizable to meet the needs of your projects. Common options available are: 120V or 12V options, junction box, dual lamp option, lamp out indicator light, bird spike lid (used for pier lights), and LED lamps. Please contact B&B Roadway today for a full list of options.
